OUR COMPANY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it’s only a bit larger than our Moon. The planet’s name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

WHAT WE ARE WORKING ON

ROAD BRIDGES

Despite being red, Mars is a cold place, not hot. It’s full of iron oxide dust, which gives the planet its reddish cast

INDUSTRIAL BUILDINGS

Jupiter is a gas giant and the biggest planet in our Solar System. It’s the fourth-brightest object in the sky

SUBWAY STATIONS

Yes, Saturn is the ringed one. This planet is a gas giant, and it’s composed mostly of hydrogen and helium

THERMAL POWER STATIONS

Venus has a beautiful name and is the second planet from the Sun. It’s terribly hot, even hotter than Mercury
